Olympus Release Preparation Checklist

Operator worksheet - 18 October 2026. Complete each check against the actual release. This worksheet grants no access and executes no action.

Release identity

Source commit: _____ Worker version: _____

Deployed AddOn version: _____ Reviewer/date: _____

1. Publish and verify the intended source

Record the reviewed commit, successful checks and actual deployment version. Verify the canonical website, signed-in member and officer views, public PDF downloads and legacy-host redirect. Check the exact supported write paths at the firewall; keep application authorization enforced.

2. Preserve recovery and deletion purposes

Verify the replacement private export and its restore checks before deleting an exact superseded copy. Obtain the owner approval required for that copy and keep the cleanup receipt. Newest-only exports have a 365-day maximum age; deletion replay has its separate fixed 366-day purpose. A database restore must replay current erasures before serving traffic.

3. Rehearse an event without accidental announcements

Use the intended organizer and raid destination. Check time zone, start, duration, capacity, sign-up roles and cancellation. Review the Discord preview before publishing. Opt in explicitly to the event reminder. Confirm one delivery and the durable result; reconcile an uncertain result rather than publishing again.

4. Check account controls and their real limits

Use approved disposable identities in an isolated test environment. Check authenticated automatic Native erasure, revoked sessions, bounded attributable guild-role removal, fresh absence before atomic cleanup, fixed private request status and unchanged original safety-marker expiry. Unknown effects remain unknown; a lost reply proves neither rollback nor completion. Serving-account completion is not all-copy erasure and does not rewrite provider recovery history or private exports. Never erase a real member as a test.

5. Attend the real councillor game/browser test

A qualified councillor must use the installed AddOn and browser scanner, and an AddOn-free member must use their own website session and normal in-game whisper. Confirm the exact live realm/build, each actor, character GUID and current native rank, key enrollment, full proof, one-time ingestion and the actual Discord role result. Do not assign High Council or promote an Officer simply to make the test pass. The current five-rank beta roster is distinct from the proposed ten-rank ladder.

The councillor game and browser must be online to supply evidence. A continuously available Worker cannot observe the game by itself. An empty eligible councillor pool, unknown provider result or untested client keeps that acceptance check open.

6. Keep the beta transition attended

The selected cutoff is 22 October 2026 at 17:00 UTC / noon CDT. Review only the fixed beta membership and native-rank Discord targets. Preserve manual leadership and Council, developer, bot and server-moderator roles, all website appointments and the directory. Leave removal OFF until separately authorized and qualified; the cutoff alone activates nothing. Do not blindly clear links or the invite queue. Fresh-source transition and any old-role reuse need their own source/custody authority; preserve original residual dates.

Final acceptance record

Website checks: _____ Discord checks: _____ Real game/browser check: _____

Recovery receipt: _____ Remaining holds: _____

Operator decision/date: _____ Scope accepted: _____

Governance ratification and appointment signatures remain separate. This worksheet is not either reviewer's signature.
